City Administrator

Mike Rizzitiello

Mayor's Message

Spring is here and the work on College Avenue and Rose Street is finishing up. Soon you'll see a landscaped entrance at the College Avenue and Rose Street intersection and around the Entrance to the City complex on College Avenue. We continue to work on the operation of the intersection traffic lights to ease traffic problems during our morning and afternoon "rush" hours. Our public works department is starting to crack seal our roadways getting ready for chip sealing streets this summer; schedule to follow.

We've been working on developing events throughout the summer, look for a week-night farmer's market at the City complex starting in July and on July 9th we're planning a fireworks display. We've initiated a Parks and Arbor committee and need volunteers to help us plan for the use of our parks, call Mike Rizzitiello at 509.529.1200 to volunteer.

Your Treatment Plant Team Protects Water Quality and the Environment

Treatment of wastewater is a relatively modern practice. While sewers were common in ancient Rome to carry away wastes, it was not until the 19th century that cities began to understand the effects of wastewater on the environment. Since then, the practice of clean water collection and treatment has undergone substantial engineering improvements, and many state and federal regulations have been enacted.

Today's wastewater treatment plant employs people skilled in environmental engineering, chemistry, biology, microbiology, and public policy to ensure the efficiency and effectiveness of the treatment process. Clean water production requires programs for maintenance and repair of equipment, upgraded operator skills, attention to safety, energy conservation, process efficiency, and up-to-date treatment and analytical technologies.

These complex treatment processes are essential to the protection of our water resources. There are no holidays for wastewater treatment — our College Place plant operates 24/7 to meet clean water standards on a continuous basis and is staffed with 5 full time employees plus an intern in the summer months. Our plant's treatment team is committed to a cleaner environment, and as a result of their continuous attention, public health and water quality are better protected today than ever before.

City Hall
625 S. College Ave
College Place, WA 99324
